

Practical1:Introduction to python basic commANDS and scripting

```
[3]: a = 8
      b = 7

      #a and b are number objects
      print(5)
      print(a)
      print(b)
      print("Random Text")
```

```
5
8
7
Random Text
```

```
[5]: # in print() function:

      print('The value of a is: ',a)
      print("the value of b is: ",b)
```

```
The value of a is:  8
the value of b is:  7
```

1. Write a Python program to display the message: "hello, World"

```
[6]: print("Hello World") # Note: text is always typed in " "
```

```
Hello World
```

2. Write a Python program to display your Name, Roll Number, Branch, Semester and Marks.

```
[10]: Name = 'Rohan Choudhary'
      Roll_no = 'A-80'
      Branch = 'AIDS'
      Sem = 'I'
      Marks = 80

      print('Name: '+ Name , 'Roll No: ' + Roll_no, 'Branch: ' + Branch,
            'Semester: ' + Sem , 'Marks: ' , Marks, sep = '\n')
```

```
Name:Rohan Choudhary
Roll No: A-80
Branch:AIDS
Semester:I
Marks:
80
```

```
[11]: print("My name is: ",Name, "\n"
          "My Roll No is: ",Roll_no, "\n"
          "My Branch is: ",Branch, "\n"
          "I am in Sem: ",Sem, sep="") #"\n" to print next line to new line
```

```
My name is: Rohan Choudhary
My Roll No is: A-80
My Branch is: AIDS
I am in Sem: I
```

```
[12]: x = input('Enter the value of : ')

      print('value of X')

      print(f'The value of x is: {x}')
```

```
Enter the value of :  80
value of X
The value of x is:  80
```

```
[16]: x = int(input("Enter value of x:"))
      y = int(input("Enter value of y:"))

      print(f'addition: {x+y}')
      print(f'subtraction: {x-y}')
      print(f'Multiplication: {x*y}')
      print(f'Division: {x/y}')
```

```
Enter value of x: 8
Enter value of y: 2

addition: 10
subtraction: 6
```

Multiplication: 16
Division: 4.0

```
[20]: l = float(input("Enter length of perimeter: "))
      w = float(input("Enter width of perimetr: "))
      print()
      print("Rectangle Dimensions")
      print()
      print( f'Area : {l*w}')
      print( f'Perimeter: {2*(l+w)}')
```

Enter length of perimeter: 7
Enter width of perimetr: 7

Rectangle Dimensions

Area : 49.0
Perimeter: 28.0

```
[22]: c = int(input("Enter the value of c: "))
      d = int(input("Enter the value of d: "))

      print(f'c==d : {c==d}')
      print(f'c !=d: {c !=d}')
      print(f'c <d : {c<d}')
      print(f'c<=d : {c<=d}')
      print(f'c > d: {c>d}')
      print(f'c>=d : {c >= d}')
```

Enter the value of c: 6
Enter the value of d: 7

c==d : False
c !=d: True
c <d : True
c<=d : True
c > d: False
c>=d : False

```
[24]: x = int(input("Enter the value of x: "))

      if x%2 == 0:
          print(f'x is Even number')
      else:
          print(f'x= {x} is odd number')
```

Enter the value of x: 5

x= 5 is odd number

```
[25]: for i in range(1,11):
      print(i)
```

1
2
3
4
5
6
7
8
9
10

```
[26]: x = int(input("enter value of x"))

      for i in range(1,11):
          print(f'{x}*{i} = {x*i}')
```

enter value of x 8

8*1 = 8
8*2 = 16
8*3 = 24
8*4 = 32
8*5 = 40
8*6 = 48
8*7 = 56
8*8 = 64
8*9 = 72
8*10 = 80
